Topic Introduction

Problem Statement

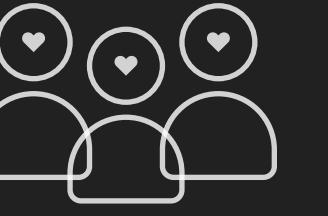

The homeless population is at an absurdly high number of over **500,000 people across the United States**. Of that number, **about 200,000 are unsheltered**.

There is also a huge lack of sympathy towards the homeless population because of certain stereotypes and misunderstanding as well as public image and popular culture. Homeless people are becoming dehumanized and people are starting to bat their eyes without understanding what they do to survive and how to help.

Goals

Educate the user on the large homeless population.

Foster more empathy on the homeless as humaize them.

Provide ways for the user to help the homeless.

Solution

Create an interactive application that shows how large the homeless demographic really is in the United States while attaching faces and quotes to humanize them.

Target Audience

Since the application directly relates to information in the surrounding area, I wanted to make it accessible to anyone who is curious on the topic.

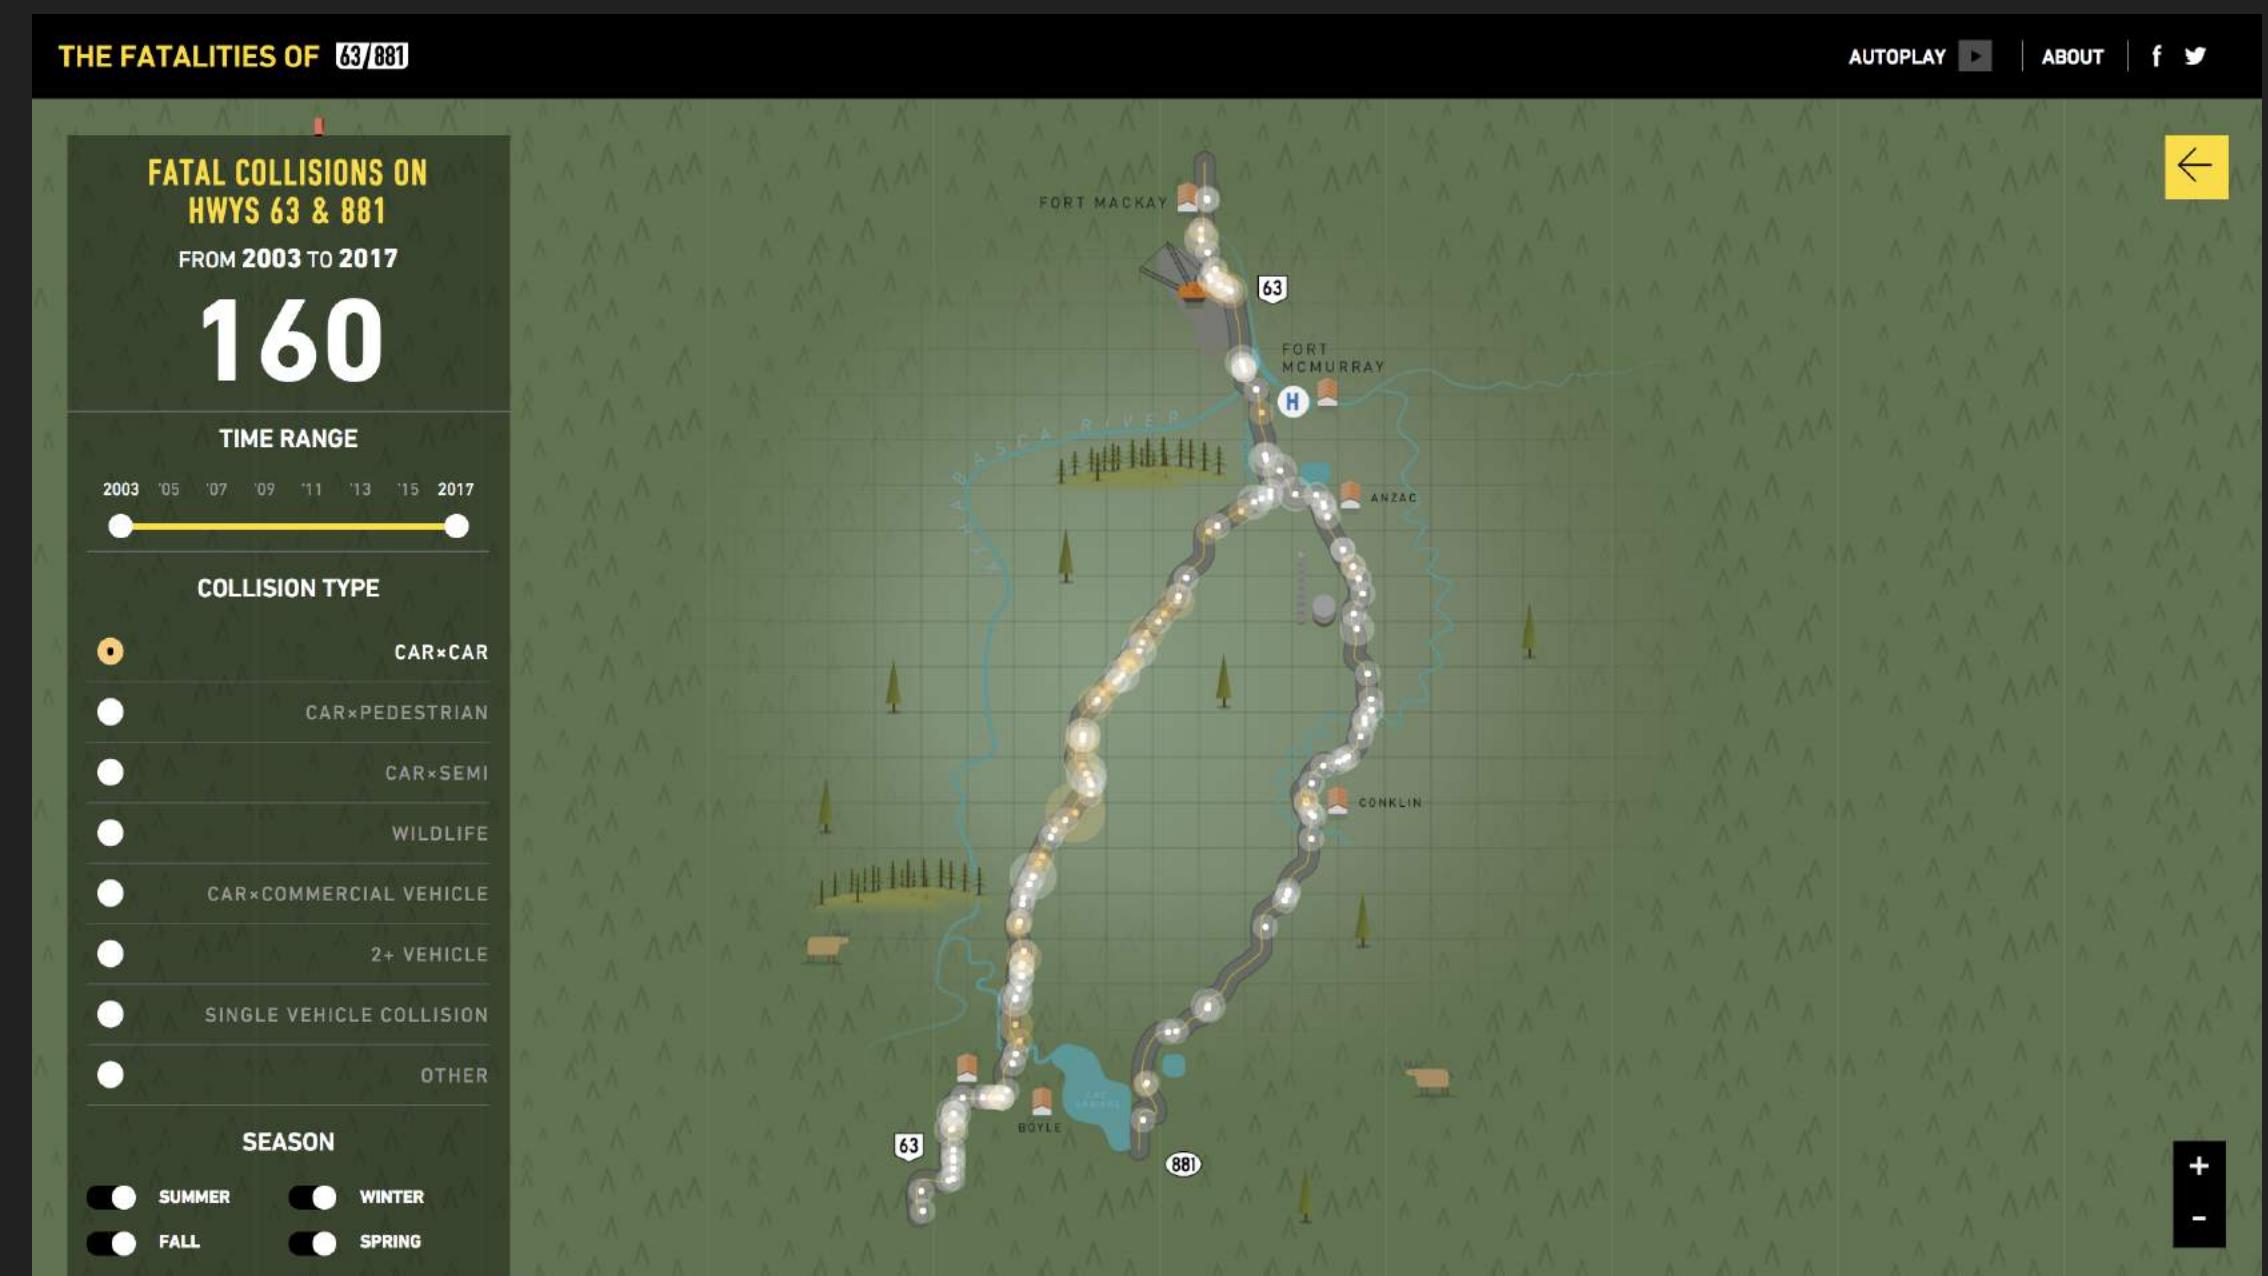

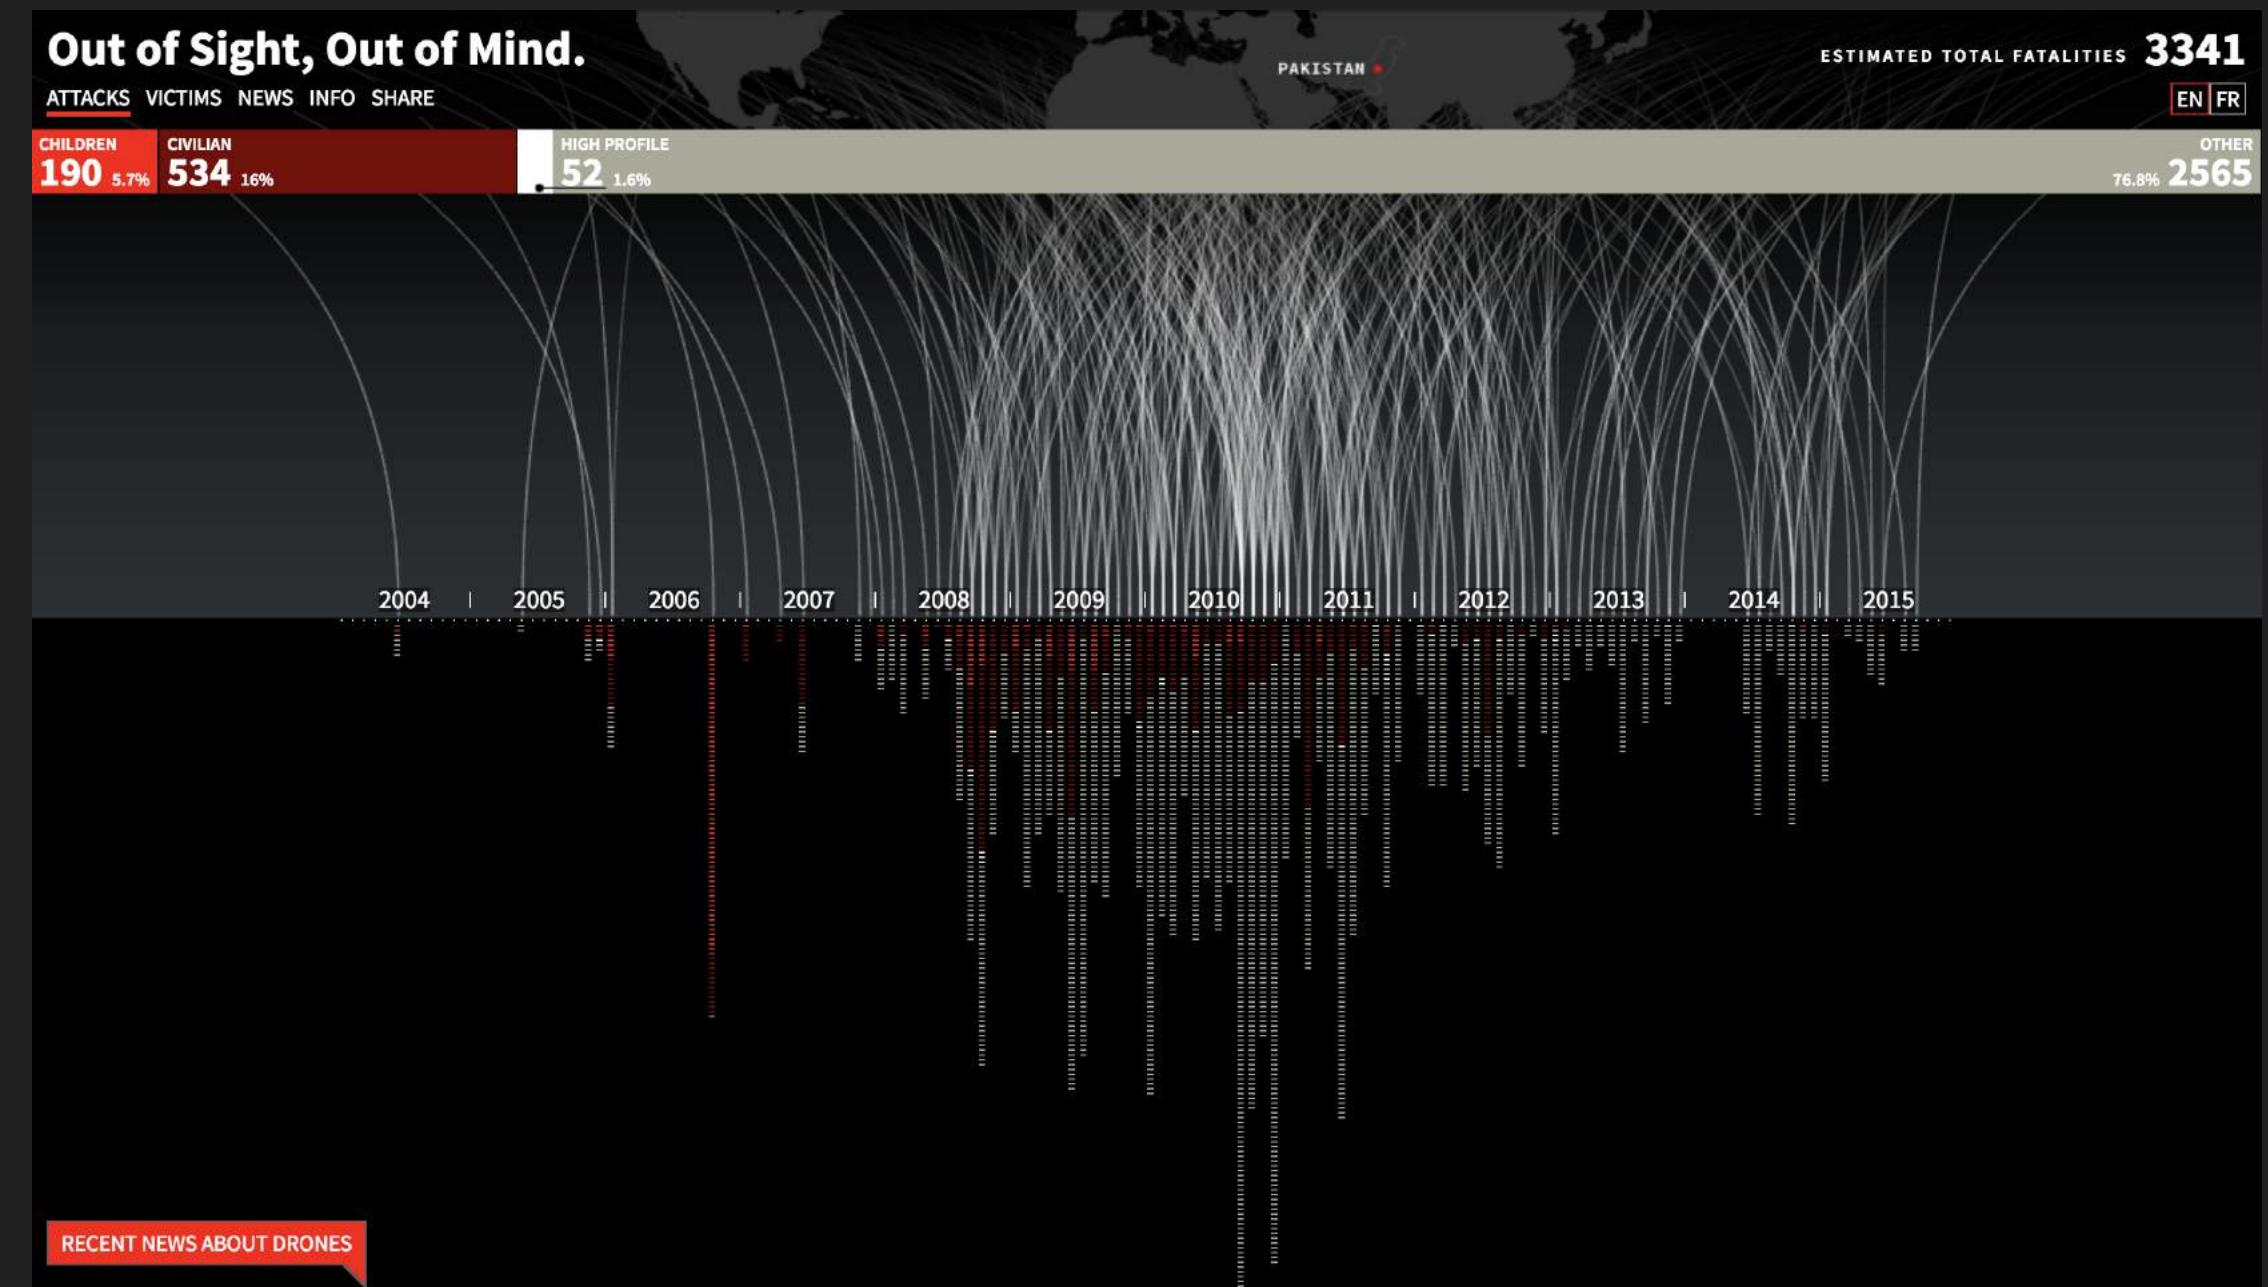

I wanted the target audience to be **Teens and Young Adults** because they would be where the most effective change can come from. By informing them at a younger age when they can understand the homeless, a more empathetic generation can be fostered.

Research

COMPETITIVE ANALYSIS

Demographics

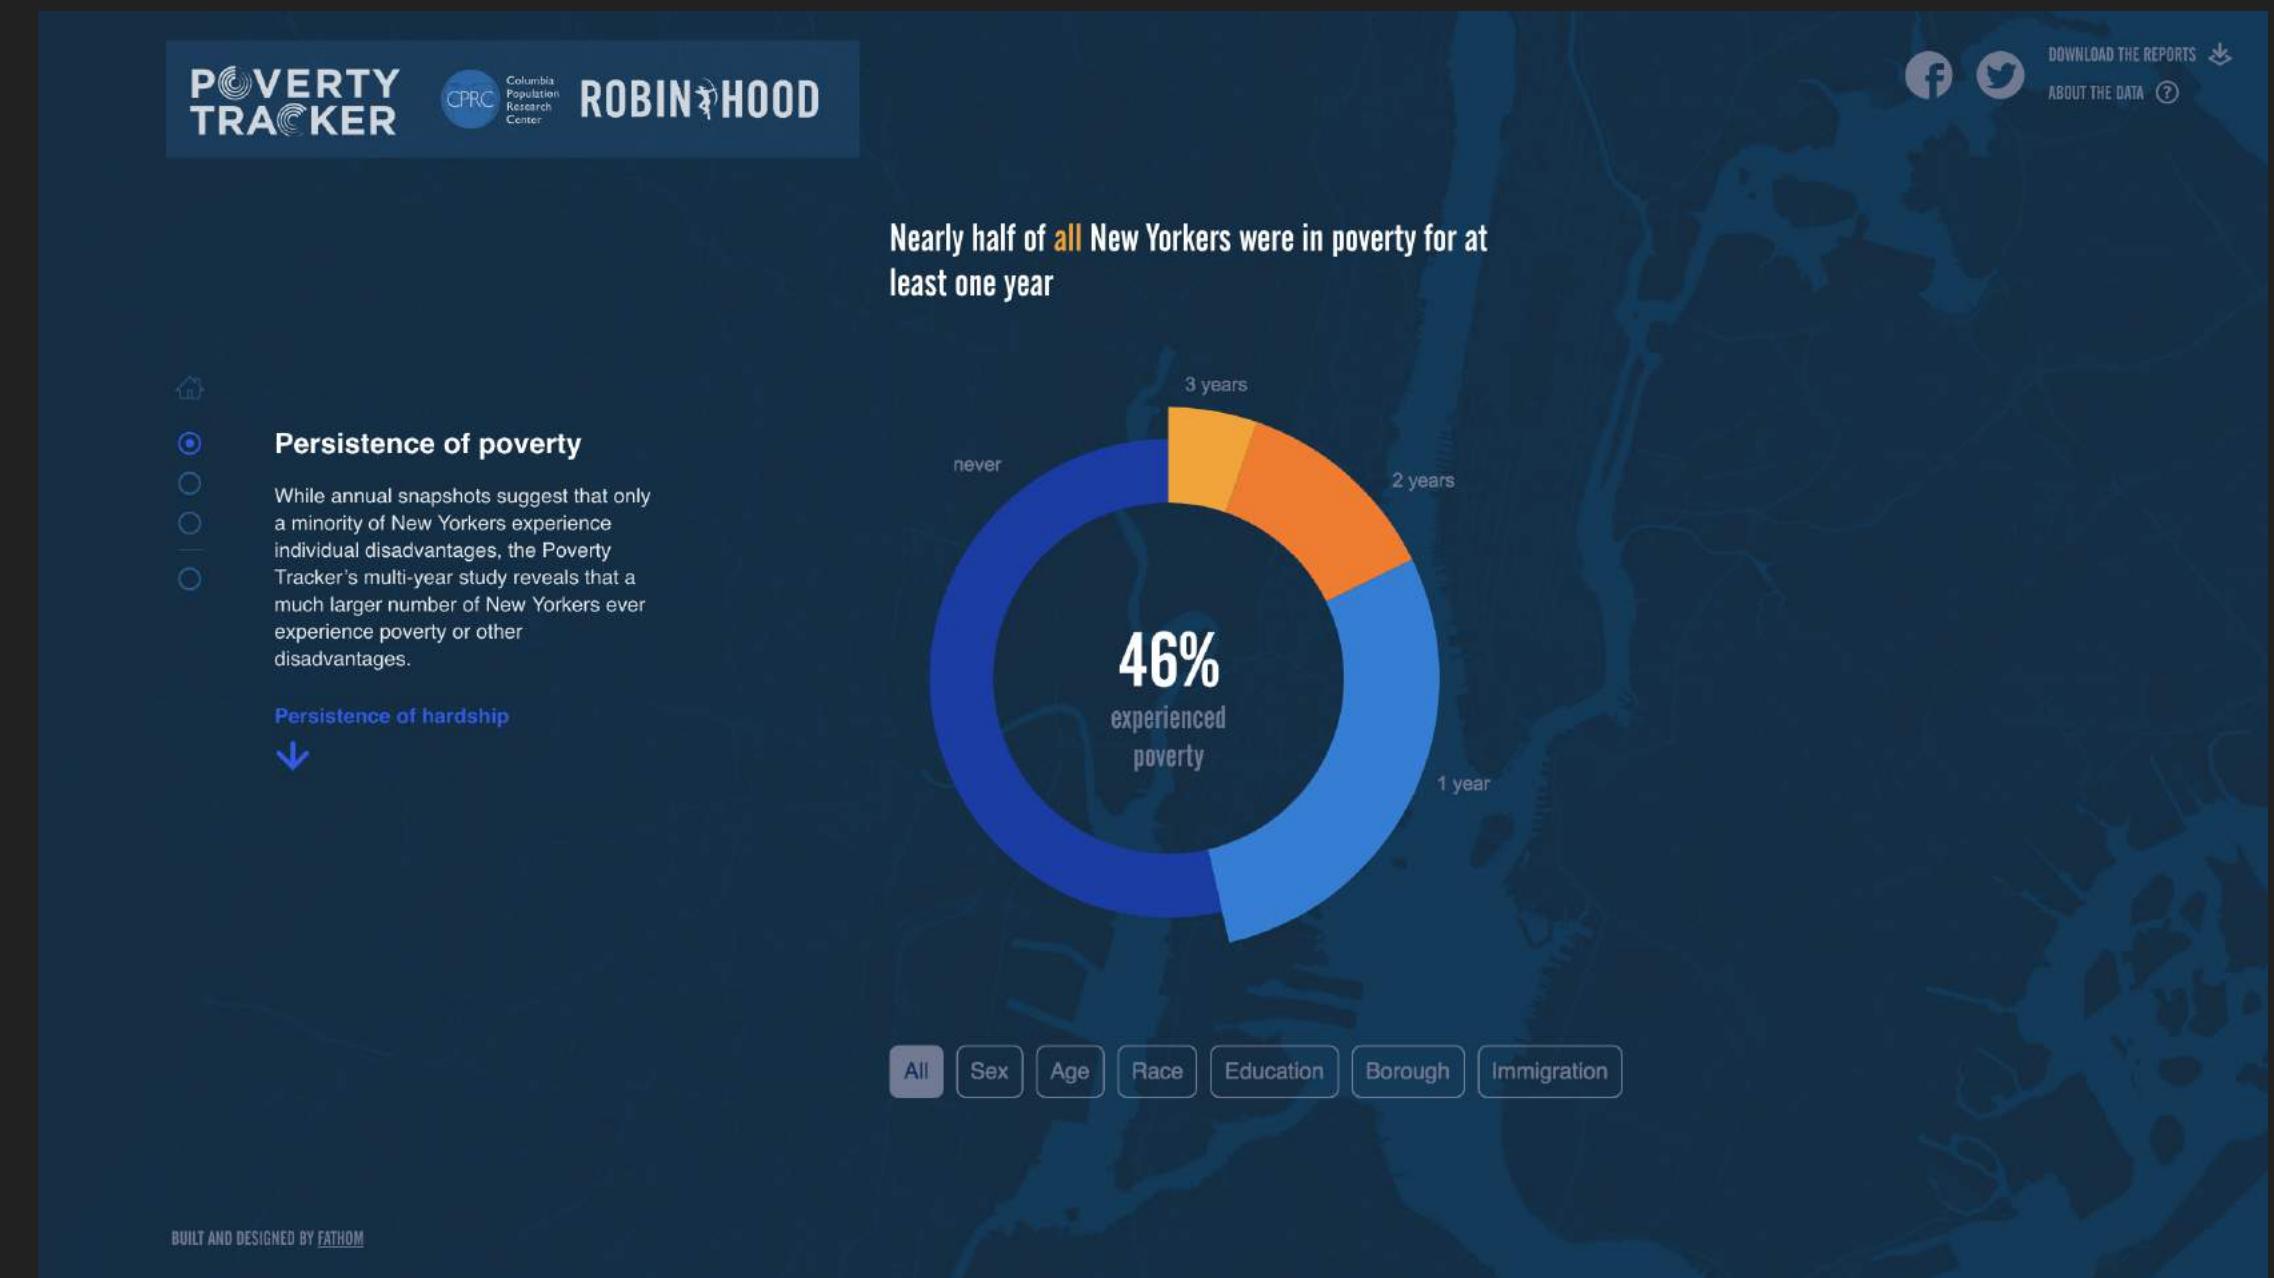

In terms of applications or platforms that explored demographics, they individualized the population by introducing each person as a node and applied them into a graphic to portray a story.

COMPETITIVE ANALYSIS

Homelessness

Poverty is used more than homelessness as a whole because the topic talks about a greater population than strictly homeless people. Finding an application that actually talked about homelessness was actually quite difficult, but the ones I did find focused more heavily on the individuals rather than the demographic.

The website features a large, dark-toned photograph of a man's face, with the text "FACE OF HOMELESSNESS" overlaid. Below the photo, a call-to-action button says "PLAY TRAILER". At the bottom of the page, there is a section titled "LATEST STORIES" with a "HORIZON ACTIVE AWARDS WINNER" badge.

Trend Research

My topic revolved on demographic information so I primarily directed my search on how people responded to graphs and charts.

From what I could gather, people generally responded pretty poorly to a traditional graph/chart when given large amounts of information. Visualization is nice but must be simple and easy to follow at just a glance so precision wasnt a huge concern of mine. I wanted to show the shock factor of the population so having a large group would be enough.

Key Features

Dynamic State Comparison

- Able to quickly compare the homeless population based off of state and population
- Toggle from list mode, which shows the population represented by dots to really show the magnitude of some states, to a grid view to quickly sort and find specific states

Demographic Layer Filter

- For each state, quickly filter through information using a layered filter system to visually show how much of a population is within a certain category
- Simple and intuitive: just add layers in any order to get the information you want

Community View

- Look at the real people within the community and see what they have to say about issues
- Humanizes the demographic and creates more empathy from the user

USER PERSONA 1

Jeffery

Jeffery loves interacting with new people and thus sparked his love for travel. Meeting new kinds of people allowed him to grow more empathetic towards people and thus wanted to help those in need. However, he did not know where to start or the information of the population he is trying to help.

LIVES IN CITY

TRAVELER

USER PERSONA 2

Mary

Mary is a young adult who is about to make a transition from a small state to a densely population state. She had grown up volunteering to help homeless people around her community but has never seen the homeless population as a whole. She wants to know about the population she will be helping in the new area she moves to and how/where she can help.

USER PERSONA 3

Ken

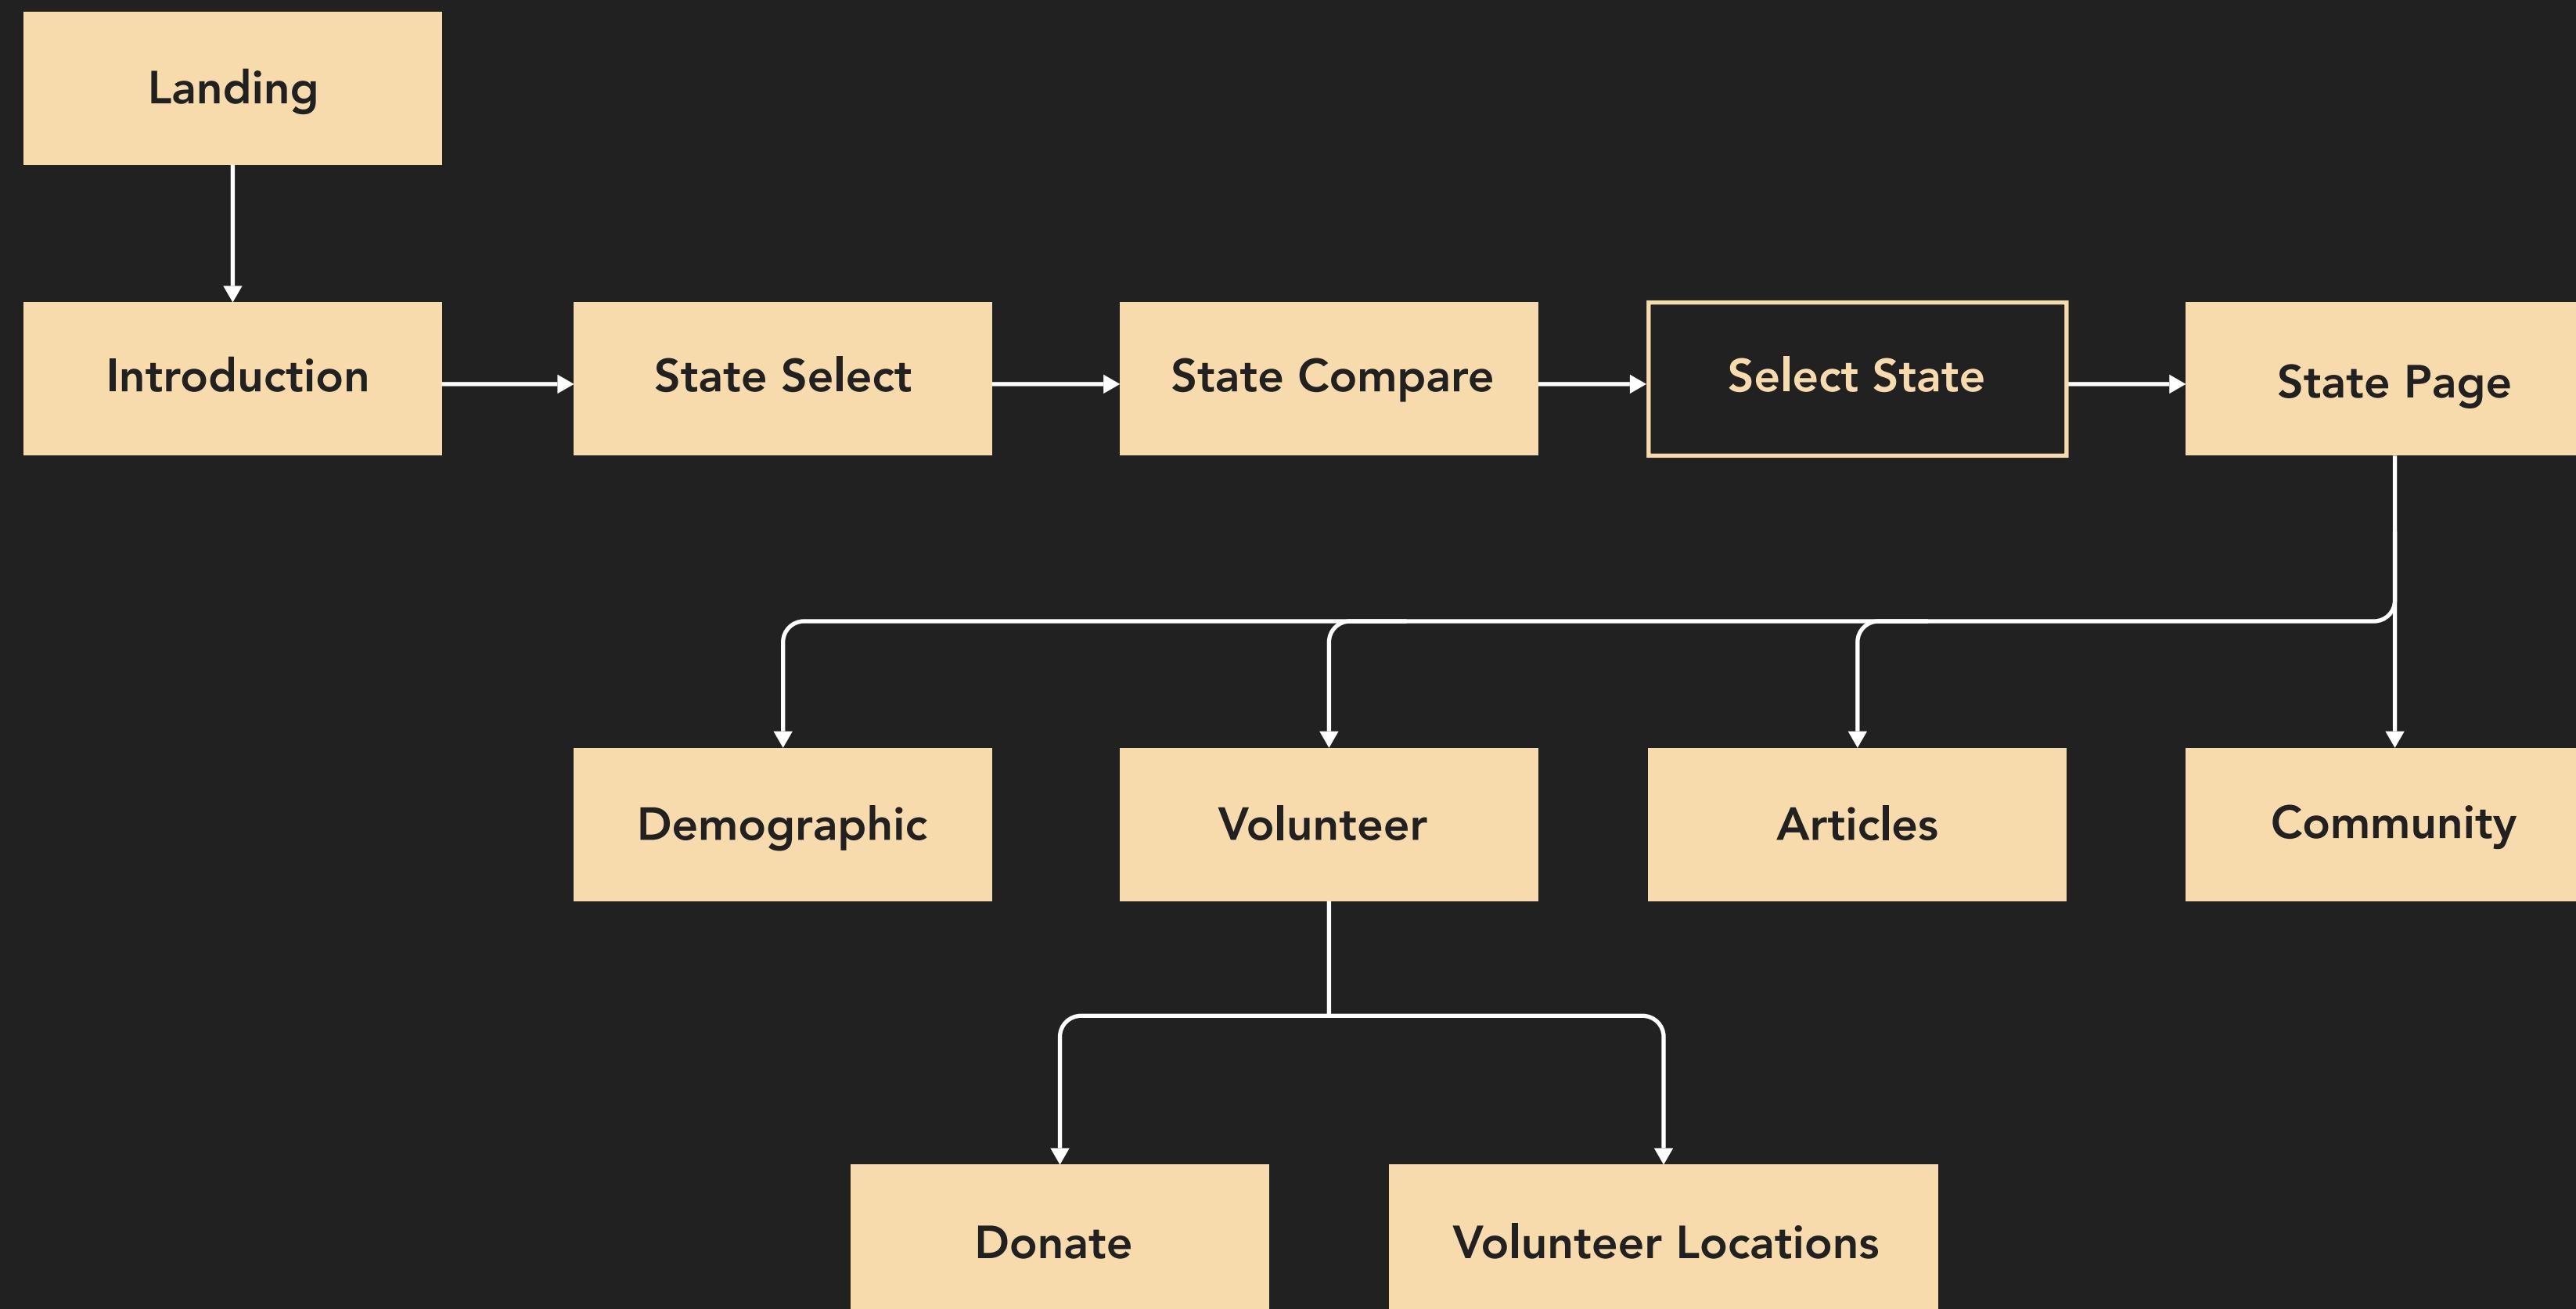

After being desensitized to the homeless population after being exposed to many online videos and stories as well as movies and video games, Ken is uncertain about how big of a problem homelessness is in the US. As a curious person, he wants to know more about the community around him and how to put a face on the demographic.
